- Engineering unlike science, is concerned not only with knowledge of natural phenomena, but also with how knowledge can serve humankind's needs and wants. Such variables as cost, user compatibility, productivity, safety, and adaptability to various external operating conditions and environments must be taken into account in the design, development, operational support and maintenance of the products and services that engineers create. Thus, engineering involves the integration of knowledge, techniques, methods, and experiences from many fields & areas.
- Major contributors to engineering research around the world include governments, private business and academia. The results of engineering research have been recognized as the highly effective way to make fruitful solutions for emphasized issues and challenges in the current world.
- Researchers, academicians, social workers, policy makers and other stakeholders are welcome to submit your original research papers related to various scientific research areas in upcoming **Call for Papers – Volume 11, Issue 06, June 2022** which brings the disciplines towards the better technologies.
- IJERT is the platform for raising voice to overcome the barriers while exercising emerging ways to identify the engineering & science challenges in the context by joining hands, gathering together and networking.
- We invite to send your original research articles, in-depth reviews or case studies formatted to given format in the author guidelines before the paper submission deadline. All research papers will be evaluated by international recognized scholars in a single/double blind reviewing process and research papers will be selected according to the international research standard.
- All the accepted research papers/abstracts will be eligible to be published in the current issue and they should register on or before the final registration deadline.
